

Editing and publishing of manuscripts submitted to *Atomization and Sprays*.

By agreement between ILASS International (Americas, Europe and Asia), and Begell House Publishing Company, the following procedures have been instituted to accelerate editing, reviewing, revision and publication of manuscripts submitted to the journal:

- The number of issues published in *Atomization and Sprays* will be increased from eight to twelve per year, beginning with Volume 19 (2009)
- The page size will be increased from 7x10" to 8 ½ x 11", beginning with Volume 19. These changes will provide an 80 percent increase in space available for publication
- First reviews will be returned to authors within two months from submission of manuscripts
- Authors will be informed that revisions must be completed within one month. A later revision will be considered as a re-submission
- Maximum time for reviewing and revising of manuscript will be five months
- Total time for publisher to publish online will be one month
- Editors will invite selected authors to write topical reviews, and encourage submission of Short Letters
- The best papers presented at regional ILASS (Americas, Europe, Asia), and international ICLASS conferences, will be selected for rapid publication
- The editors and the publisher will make every effort to maintain high standards of editing and to reduce editing and publishing times to result in substantial increases in the Impact Factor, Immediacy Index and rankings.
